NPIC PROJECT NUMBERING SYSTEM

The attached Table I depicts the procedure for determining NPIC project numbers.

The account numbers 0 thru 9, appearing in the first numbered column of Table I, are the first digits of the NPIC eight position project numbering system. These numbers represent the general category of the project.

The second digit in an NPIC project number is derived from the applicable block in line with the number forming the first digit. An exception to this is in the [   ] 25X1 blocks which utilizes the 2nd thru the 5th position of the project number for the mission designation, and the sixth position for the "bucket designation". The third thru the 6th number of the normal project numbers represent a consecutive numbering account. The 7th and 8th positions are used when designating lettered splits to the master project number.

In case of the 15---- and 17---- series project numbers, a subdivision has been made to identify various aircraft programs and is shown in Table II.
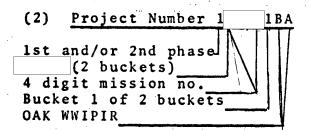

In the case of the 45---- series project numbers, a subdivision has been made to identify various countries/ organizations which NPIC services. i.e.

Misc.	450001 - 452999
DIA	453001 - 453999
NSA	454001 - 454999
IAS	455001 - 455999
